

# superroots air-pot™

root enhancement system

The Superroots Air-Pot is one of two Root Enhancement Systems from The Caledonian Tree Company.

## The Superroots Air-Pot™

The Superroots Air-Pot revolutionises container growing, producing dense radial root systems and eradicating root circling.

## The Superroots Fielder™

The Superroots Fielder acts on the roots of a plant in the field, producing a fibrous root system which lifts easily and inexpensively.

## The Superroots Air-Pot

The Superroots Air-Pot is a container with a cusped sidewall. The cusps on the outside of the pot are open ended, which allows the air to act on the roots.

The result is root branching right back to the stem and the rapid build up of a radial root system.

-  The continuous pruning process prevents any possibility of circling.
-  The Superroots Air-Pot reduces growing time at the nursery, with plants fully rooted and ready for sale in as little as six weeks.
-  Small stock can be planted directly into 30, 50 or 80 litre containers, making several pottings unnecessary.
-  With no root circling, the plant does not suffer if it is kept for an extra season in the Superroots Air-Pot. As a result it retains its full value.
-  The superroots Air-Pot is re-useable and recyclable.

## Why choose Superroots

Superroots Root Enhancement Systems are proven to be the best method for producing plants in the nursery for successful transplant into the landscape. Simple, but effective, the Superroots Bag and Superroots Air-Pot ensure vigorous, radial root systems every time, which growers can guarantee.

“A beautiful crown is a great selling point for a tree. But in the long run it counts for nothing without equally good roots to sustain it.”

Quercus palustris  
2 years in a Superroots Air-Pot

A washed root system showing a perfect radial root structure.

## Where to buy Superroots

The Caledonian Tree Company's Superroots Bag and Superroots Air-Pot are available from:

### Netherlands:
